

## **Senior Manufacturing/Quality Engineer**

**Pingree Grove, IL**

### Responsibilities:

The Senior Manufacturing/Quality Engineer will work closely with Engineering, Operations, Procurement, R&D and Customer Care in the following functions:

- Drives Continuous Process Improvement activities throughout the organization using statistical techniques and lean methodology.
- Follow up and track the action plans of corrective actions.
- Perform internal audits and facilitate action plans for non-conformances/customer complaints and Warranty Claims
- Focus on supplier continuous improvement efforts, which include visiting suppliers for audits.
- Communicates quality issues across all areas of the company.
- Qualify suppliers according to company requirements. Monitors parts from acquisition through the inspection and manufacturing cycle to communicate and resolve supplier-related process problems as they occur through the MRB process.
- Evaluates suppliers' internal functions, end-to-end, to assess their overall performance, including the development of sub-suppliers, and provides feedback to improve their operation. Develop world class Suppliers Management Program through the use of Six Sigma and Lean methodologies.
- Drive to improve product/process yields, reduce defects, and subsequently improve delivery and product to the customer.
- Communicate through all levels of the organization and customers

### Requirements:

- Bachelors Degree in Mathematics/Mechanical Engineering
- Minimum 4yrs experience in a manufacturing environment with relevant experience in Quality/Manufacturing Engineering
